

Range ()

By Dante :p

Range(start, stop)

#This function generates a sequence of integers with indications of where to start and end.

EXAMPLE

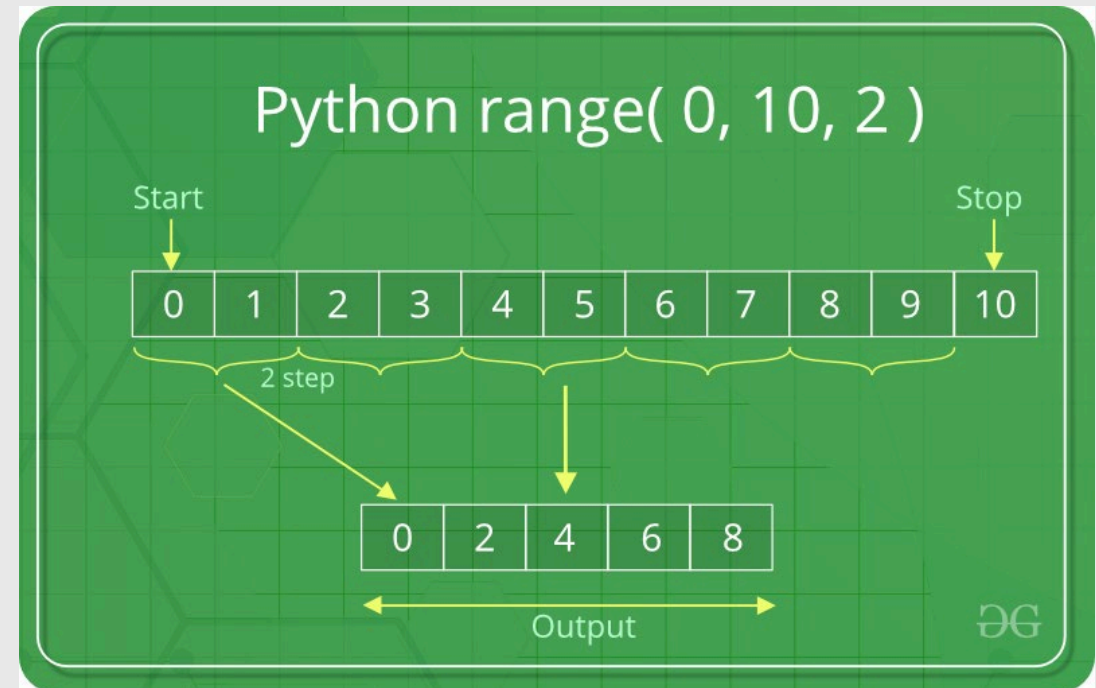

```
#Converting a range  
to a list
```

```
#Example:
```

```
numbers = list(range(3, 10))  
print(numbers)
```

```
#output:
```

```
[3, 4, 5, 6, 7, 8, 9]
```

```
print("Thank you for your attention!")
```

Thank you for your attention!
